

Patient Name : Fall 5
Age/Gender : Male
Patient ID : 11788766887033

Referred By : Dr Amit Kumar
Reported Date : 03 April 2025
Reported Time : 16:00

Study - CT Abdomen & Pelvis

Observations

1. Evidence of large 21 mm cholelithiasis. Right kidney measures . 9.2 x 4.9In (cms). No evidence of parenchymal thinning or scarring is seen.
2. Evidence of 3 mm 1020 HU right lower polar renal calculus, also evidence of 12 mm 1180 HU elongated right lower ureteric calculus with mild hydroureteronephrosis.
3. It shows normal enhancement in Cortico-medullary and nephrogram phases. Prompt excretion noted. Right ureter is not dilated. Right vesi-co-ureteric junction appears normal. Left kidney measures. 9.0 x 3.7In (cms).
4. No evidence of parenchymal thinning or scarring is seen.
5. Evidence of multiple calculi, the largest measuring ~14 mm 818 HU left lower polar calyceal -non-obstructive left renal calculus.
6. It shows normal enhancement in Cortico-medullary and nephrogram phases. Prompt excretion noted. Left ureter is not dilated.
7. Evidence of large 21 mm cholelithiasis. Right kidney measures . 9.2 x 4.9In (cms). No evidence of parenchymal thinning or scarring is seen.
8. Evidence of 3 mm 1020 HU right lower polar renal calculus, also evidence of 12 mm 1180 HU elongated right lower ureteric calculus with mild hydroureteronephrosis.
9. It shows normal enhancement in Cortico-medullary and nephrogram phases. Prompt excretion noted. Right ureter is not dilated. Right vesi-co-ureteric junction appears normal. Left kidney measures. 9.0 x 3.7In (cms).
10. No evidence of parenchymal thinning or scarring is seen.
11. Evidence of multiple calculi, the largest measuring ~14 mm 818 HU left lower polar calyceal -non-obstructive left renal calculus.
12. It shows normal enhancement in Cortico-medullary and nephrogram phases. Prompt excretion noted. Left ureter is not dilated.

Impression

- Evidence of 3 mm 1020 HU right lower polar renal calculus, also evidence of 12 mm 1180 HU elongated right lower ureteric calculus with mild hydroureteronephrosis.
- Evidence of multiple calculi, the largest measuring ~14 mm 818 HU left lower polar calyceal -non-obstructive left renal calculus.
- Large GB calculus 21 mm.
- Evidence of 3 mm 1020 HU right lower polar renal calculus, also evidence of 12 mm 1180 HU elongated right lower ureteric calculus with mild hydroureteronephrosis.
- Evidence of multiple calculi, the largest measuring ~14 mm 818 HU left lower polar calyceal -non-obstructive left renal calculus.
- Evidence of 3 mm 1020 HU right lower polar renal calculus, also evidence of 12 mm 1180 HU elongated right lower ureteric calculus with mild hydroureteronephrosis.
- Evidence of multiple calculi, the largest measuring ~14 mm 818 HU left lower polar calyceal -non-obstructive left renal calculus.
